[What Can A Face Scan See](#)

[Check This Out!](#)

This is how a face scan works: >>> Your skin is the largest organ in your body so it is a thermometer for what is going on inside.

>>> We are measuring the right side to left side. Anything .3 degrees or more is significant.

>>> Red and white are the hottest colors and blue and black are the coldest temperatures.

>>> The nose will usually be colder and behind of the eyes next to the nose is the hottest.

>>>In the face we can see sinusitis, migraine headaches, TMJ, periodontal disease, leaky amalgams, bad root canals, jaw joint dysfunctions and thyroid disorders, just to name a few.....and we know that most diseases start in our mouths.

Your Choices are: 1} You can look at the above picture to compare your hotspots or go on facebook to see the image bigger.

2} Or for the low price of **\$9.95** you can have a 5-10 min consult with Dr. Melvin to go over your face image

3} Or you can receive \$100 off coupon for a complete thermal imaging study.

We are doing scans here at the longevity conference. The hotel has provided us a very nice private room where you can choose from the following thermal scans: Breast \$250., Women or Mens Health Screen \$375.00, Full Body \$550.00, Take \$100. off scan of your choice!
